Enriched Air Nitrox Course

Have you seen other divers using enriched air and wanted to learn more about it? By using a higher oxygen content that enriched air provides, you can have longer bottom times, less fatigue after dives, or an increased safety margin to help avoid decompression sickness. These are a few of the numerous advantages of nitrox. All you need to take the course is to be a certified diver over the age of 14.

The Program

During the class you will learn more about the benefits of using enriched air, safety instruction, dive planning, and analyzing cylinder contents. After the classroom instruction and practical applications, you will become a certified enriched air diver (actual dives are no longer required). Once you are certified you will be able to use your card to take advantage of the benefits of nitrox. The class takes place over one afternoon or evening and costs \$175 plus academic materials.
